

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

Recruitment Management System

The domain of the Project:
SALESFORCE

Team Mentors (and their designation):
Sriram Yarrabothula
Salesforce Developer

Team Members:

-Sriram Yarrabothula
-Jijo K Jose
-Aman Kumar Mishra

Period of the project

November 2025 to April 2026

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

Declaration

The project titled "Recruiting Management System" has been mentored by Sriram Yarrabothula Sir, organized by SURE Trust, from November 2025 to April 2026, for the benefit of the educated unemployed rural youth for gaining hands-on experience in working on industry relevant projects that would take them closer to the prospective employer. I declare that to the best of my knowledge the members of the team mentioned below, have worked on it successfully and enhanced their practical knowledge in the domain.

Team Members:

1. SRIRAM YARRABOTHULA
2. AMAN KUMAR MISHRA
3. JIJO K JOSE

Future Scope & Conclusion

Executive Summary

The "Recruiting Management System" project was developed to modernize and streamline the end-to-end lifecycle of candidate sourcing, evaluation, and hiring within organizations using the Salesforce platform.

- *Traditional recruiting approaches often rely on fragmented tools and manual coordination, resulting in inefficiencies, data inconsistencies, and limited visibility.
- *This project introduces a unified, scalable, and user-centric solution that enhances operational efficiency, transparency, and data-driven decision-making.
- *The system is architected using a robust Salesforce data model, incorporating standard and custom objects with well-defined relationships.
- *It enables seamless candidate registration, job position management, interview tracking, and offer generation through an integrated workflow.
- *Advanced automation using Flows and Apex ensures real-time processing, reduces manual intervention, and enforces business rules effectively.
- *Built-in validation mechanisms maintain high data integrity by preventing invalid salary ranges and enforcing application deadlines.
- *Lightning Web Components deliver a dynamic and responsive user interface for interview management and job dashboards.
- *Comprehensive reporting provides actionable insights into hiring trends, interview performance, and offer acceptance rates.
- *The system significantly reduces processing time, minimizes errors, and improves coordination across recruiters and HR managers.

Introduction

The Recruiting Management System is a Salesforce-based application designed to streamline and automate the planning, organization, and execution of hiring processes within an organization.

Background and Context:

Recruitment in many organizations is traditionally handled through manual processes or disconnected tools such as spreadsheets and emails. This approach leads to inefficiencies, data redundancy, and a lack of real-time visibility into the candidate pipeline.

Problem Statement / Goals:

The primary objective is to design an integrated Recruiting Management System that simplifies and automates the complete hiring lifecycle—enabling job creation, candidate tracking, and offer management while minimizing manual effort.

Scope and Limitations:

The scope includes managing job positions, candidates, applications, interviews, and offers within the Salesforce platform. It is currently limited to the Salesforce ecosystem and does not support third-party job board integrations or resume parsing AI at this stage.

Innovation Component:

The project introduces innovation through the use of Salesforce Flows for guided application forms, Apex for advanced business logic, and LWC for a dynamic recruitment dashboard.

Project Objectives

Objectives and Goals

- * To design and develop a centralized Recruiting Management System that streamlines the complete hiring lifecycle, including job requisition and applicant tracking.
- * To implement automation and validation mechanisms (Salary Range, Interview Result checks) using Salesforce tools to ensure high data accuracy and compliance.
- * To provide a secure, user-friendly, and interactive platform for HR Managers and Recruiters with role-based access and controlled visibility.
- * To enable effective decision-making by offering real-time insights through dashboards, allowing monitoring of recruitment speed and offer success.

Expected Outcomes and Deliverables

1. A fully functional and scalable **Recruitment Management System** developed on Salesforce, capable of efficiently managing multiple **job openings** and related operations in a structured manner.
2. A well-defined data model with standard and custom objects, along with automated workflows, validation rules, and Apex logic to support core functionalities.
3. Interactive dashboards, reports, and user interfaces (LWC) that provide clear visibility into **recruitment** data, improve transparency, and enhance overall system usability.
4. A significant improvement over traditional manual systems in terms of efficiency, accuracy, data management, and overall coordination, along with proper project documentation for future enhancements.

Methodology and Results

• Methods / Technology Used

The project adopts a systematic and iterative development methodology on the Salesforce platform, combining both declarative and programmatic approaches. Core functionalities are implemented using standard Salesforce features such as objects, relationships, validation rules, and security settings, while advanced requirements are handled using Apex (triggers, classes) and Flows for automation. Lightning Web Components (LWC) are used to build a responsive and interactive user interface, ensuring better usability and performance.

The development process includes requirement analysis, data modeling, implementation, testing, and deployment. Each module (event creation, registration, vendor management, payment tracking) is developed and tested individually before integration into the complete system.

• Tools / Software Used

The project was developed using the following tools and technologies:

1. Salesforce Lightning Platform
2. Lightning Web Components (LWC)
3. Apex Programming Language
4. Salesforce Flow Builder
5. SOQL (Salesforce Object Query Language)
6. Salesforce Reports & Dashboards

These tools enabled the development of a scalable, secure, and efficient system.

• Data Collection Approach

The system collects and manages data entered by users, such as job details, job information, openings, and job recruitments. Input is captured through forms and validated using rules to ensure accuracy and consistency. The data is stored in structured objects and is used for tracking, reporting, and decision-making purposes.

Project Architecture

The system follows a multi-layered architecture within the Salesforce ecosystem:

1. **Data Layer:** Includes standard objects (Account, Contact) and custom objects (**Job, Application, Interviewer, Placement, Job-Interviewer**). Relationships such as lookup and master-detail ensure proper data linkage.
2. **Application Layer:** Implements business logic using **Flows and Apex**. This layer manages automation such as **application processing, placement updates, duplicate prevention, and job status management**.
3. **Presentation Layer:** Built using **LWC** and Lightning App Builder, providing an intuitive interface for recruiters.
4. **Security Layer:** Managed using **Profiles, Roles, and Sharing Rules** to ensure data privacy and controlled access.
5. **Analytics Layer:** Reports and Dashboards provide real-time insights into **hiring performance, time-to-fill, and recruitment costs**.

Salesforce Data Model (Objects and Relationships)

The structure below represents a **Salesforce Recruitment Management System** where **User** acts as the central object connected to all other objects. The **Job__c** object is linked with **Application__c** to manage **candidates**, and **Application__c** is further connected to **Placement__c** to handle **hiring results**. The **Interviewer__c** object is connected to **Job__c** through the **Job_Interviewer__c** junction object, creating a many-to-many relationship between **job openings** and **interviewers**. Overall, the connections show a clear flow where **jobs** are associated with **applications** and **placements**, while **interviewers** are linked to **jobs** through a junction object, making the system well-structured and organized.

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

1. Job Creation Flow (Screen Flow) This flow allows **recruiters** to create new **job positions** by entering details such as **job title, type, location, and salary range** through a user-friendly interface. Once submitted, the system automatically stores the data and confirms successful **job position** creation.

Last saved on 28/4/2026, 11:48 am **Active** Run De

2. Candidate Application Flow (Screen Flow) This flow enables **candidates** to apply for **jobs** by selecting a **job position** and entering their professional details. It validates inputs, prevents duplicate applications (ensuring the same candidate does not apply for the same job twice), and creates an application record linked to both the **job position** and the **candidate**.

3. Interview to Application Status Flow (Record-Triggered Flow) This flow is activated whenever an **Interview** record is completed. It evaluates the interview feedback and automatically updates the related **Application** status to "**Shortlisted**" or "**Rejected**" based on the outcome.

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

4. Offer Acceptance Flow (Record-Triggered Flow) This flow is triggered when an **Offer** record status is updated to "**Accepted**". It automatically updates the related **Job Position** status to "**Closed**" to ensure that filled positions are no longer marked as open.

5. Job Closure Scheduled Flow This scheduled flow runs at defined intervals (such as daily). It automatically closes **Job Positions** if the required number of openings has been filled, keeping recruitment records accurate and up-to-date.

6. Interview Reminder Scheduled Flow This scheduled flow sends automated reminders to **candidates and interviewers** one day before the scheduled interview date. It triggers email notifications to improve communication, attendance, and overall coordination.

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

User Roles and Security Management

The system ensures data security and controlled access using **Salesforce** security features. The **Organization-Wide Default (OWD)** is set to **Private**, which restricts record access to only the owner and authorized users, ensuring data confidentiality across **candidate and job records**.

A **Role Hierarchy** is implemented with levels such as **Admin**, **HR Manager**, **Recruiter**, and **Interviewer**, allowing higher roles to access and manage data of lower roles, ensuring proper supervision and control throughout the **hiring process**.

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

Different Profiles like System Admin, Recruitment Manager, and Interviewer are defined to provide role-based permissions, controlling what actions users can perform within the system. This combination of OWD, roles, and profiles ensures secure, structured, and efficient access management for all hiring data.

Dashboard

The dashboard provides a visual and real-time overview of key system metrics. It displays important information such as **Total Jobs**, **Total Placements**, **Active Applications**, and **Hiring Trends**, allowing users to quickly understand overall performance and track progress efficiently.

a. Jobs by Type

The **Jobs by Type** report categorizes **job openings** based on their type (e.g., Full-time, Part-time, Internship), helping users understand the distribution of different kinds of **roles** and analyze which type is most frequent.

b. Applications per Job

The **Applications per Job** report provides a detailed view of how many **candidates** have applied for each **job opening**. This helps in tracking **hiring** levels, evaluating **job** popularity, and making improvements in **recruitment** strategy and promotion.

c. Total Placement Revenue: The **Revenue** report summarizes the total income generated from **placements and hiring fees**. It helps in monitoring financial performance, comparing revenue across different **departments or clients**, and supporting better financial planning and decision-making.

d. Recruiter Per Cost The **Recruiter Cost** report highlights the expenses incurred for **recruiters or agencies** in each **hiring drive**, such as sourcing or advertising costs. It enables administrators to manage budgets efficiently, control expenses, and analyze cost distribution across different **recruitment** cycles.

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

LWC COMPONENTS

The **RMS Dashboard** is a Lightning Web Component (LWC) in Salesforce that provides a clear and centralized view of all **job openings** in the system.

It displays important details such as **job name, department, open date, close date, and hiring status**, allowing users to quickly understand what **positions** are upcoming or ongoing.

The dashboard retrieves data from Salesforce using **Apex** and presents it in a simple and organized format using **Lightning Design System**. It helps **recruiters** and administrators easily monitor **recruitment**, improve planning, and get a quick summary of all **hiring** activities in one place.

The screenshot displays the RMS dashboard interface. At the top, there is a navigation bar with the title 'Recruiting Management Sy...' and several menu items: 'Home', 'Company', 'Candidates', 'Job Positions', 'Applications', 'Interview', 'Recruiter', 'Job Recruiter', and 'Offer'. Below the navigation bar, the dashboard is divided into two main sections. The left section, titled 'Application Form Screen', contains a form with fields for 'Contact' (a dropdown menu), 'Job Position' (a dropdown menu), 'Application Date' (a date picker showing '03-May-2026'), and 'Resume Link' (a text input field). A blue 'Submit' button is located at the bottom right of this section. The right section, titled 'Create Job Position Flow', contains a form with fields for 'Select Company' (a dropdown menu), 'Job Title' (a text input field), 'Job Type' (a dropdown menu), 'Location' (a text input field), 'Salary Range' (a text input field), 'Number of Openings' (a text input field with the value '1'), 'Status' (a dropdown menu), and 'Posted Date' (a date picker). A blue 'Submit' button is also present at the bottom right of this section.

Social / Industry relevance of the project

The **Recruitment Management System (RMS)** holds strong relevance in both social and industry contexts as it addresses the growing need for digital transformation in **talent acquisition** and human resource administration. In today's fast-paced environment, organizations, educational institutions, and corporate sectors regularly conduct **hiring drives**, internships, and professional placements to secure skilled talent. Managing these activities manually often leads to inefficiencies, data redundancy, and a lack of transparency in the candidate pipeline. This project provides a centralized, automated, and structured solution that significantly improves the way **recruitment** is organized and executed.

From a social perspective, the system enhances user convenience by simplifying the **job application** and tracking process. **Candidates** can easily apply for roles, monitor their interview status, and receive updates in real time, which improves engagement and accessibility. It also promotes better communication between **recruiters** and applicants through automated notifications and status updates. By reducing physical paperwork and manual coordination, it contributes to a more sustainable and modern approach to professional networking and employment.

From an industry perspective, the project aligns with modern enterprise requirements for automation, data accuracy, and real-time analytics. Organizations increasingly rely on platforms like **Salesforce** to manage business processes efficiently, and this system demonstrates how CRM tools can be extended beyond sales into **human capital management**. Features such as **Flows, Apex automation, role-based security, and dashboards** reflect real-world industry practices used in enterprise-level applications.

The system also supports better decision-making and resource optimization by providing insights into **hiring trends, time-to-fill metrics, and recruitment costs**. This is highly valuable for businesses and institutions that aim to improve profitability and operational efficiency. Moreover, it reduces dependency on manual labor, minimizes errors in candidate evaluation, and ensures faster processing of **placement-related** activities.

Overall, the project demonstrates how digital solutions can transform traditional **hiring** into a more efficient, transparent, and scalable system, making it highly relevant for both social use and industry-level adoption.

Learning and Reflection

- **Document every team member's new learning (in terms of technology, management, etc.)**
 - 1. **Salesforce Platform Knowledge** Gained hands-on understanding of Salesforce architecture including objects, relationships, Flows, Apex, and Lightning Web Components.
 - 2. **Data Modelling Skills** Learned how to design efficient data models using standard and custom objects with proper relationships like lookup and master-detail.
 - 3. **Automation Techniques** Developed knowledge of process automation using Screen Flows, Record-Triggered Flows, and Scheduled Flows to reduce manual work.
 - 4. **Apex Development** Improved programming skills by writing Apex triggers and classes for implementing advanced business logic and validations.
 - 5. **UI Development (LWC)** Learned how to create interactive and responsive user interfaces using Lightning Web Components.
 - 6. **Reports and Dashboards** Gained experience in building reports and dashboards for data analysis and business decision-making.
 - 7. **Security and Access Control** Understood role hierarchy, profiles, and OWD settings to manage data security and user access.
 - 8. **Team Collaboration Skills** Improved communication, task distribution, and coordination while working as a team on a real-time project.
-

- **Document every team member's experience (overall experience)**
- 1. **Practical Project Experience** Worked on a complete end-to-end Salesforce project, from requirement analysis to deployment, gaining real industry exposure.
- 2. **Problem-Solving Experience** Faced and resolved real-time challenges in flows, relationships, and automation logic, improving analytical thinking.

Innovation & Entrepreneurship Hub for Educated Rural Youth (SURE Trust – IERY)

3. **Development Experience** Experienced building a fully functional system with multiple modules like jobs, applications, interviewers, and placements.
4. **Team Coordination Experience** Learned how to collaborate effectively with team members, divide tasks, and complete project milestones on time.
5. **Technical Confidence** Built confidence in using Salesforce tools and technologies independently for development and customization.
6. **Time Management Experience** Improved ability to manage time efficiently while balancing development, testing, and documentation tasks.
7. **Professional Exposure** Gained understanding of how real-world business applications are designed and implemented in organizations.
8. **Overall Learning Experience** Developed both technical and professional skills, making the project a valuable learning experience in Salesforce development and teamwork.

Conclusion and Future Scope

- **Recap objectives and achievements**

- The primary objective of the **Recruitment Management System (RMS)** was to design and develop a centralized platform that efficiently manages the complete **recruitment** lifecycle, including **job creation, candidate application, interviewer coordination, and placement tracking**.
- The system successfully achieved this by implementing a structured Salesforce data model, automation using **Flows and Apex**, and an interactive user interface using **Lightning Web Components**.
- It also ensured data accuracy, reduced manual effort, and improved overall operational efficiency through validation rules and role-based security.
- Additionally, reports and dashboards were implemented to provide real-time insights into **hiring performance, applicant trends, and recruitment metrics**, supporting better decision-making.

- **Future scope of this project**

- The project can be further enhanced by integrating mobile application support to allow **recruiters and interviewers** to manage **hiring tasks** on the go.
- Advanced features such as **AI-based candidate matching**, predictive analytics for **hiring success**, and chatbot support for **applicant queries** can also be added.
- Integration with external systems like **job boards (e.g., LinkedIn), email communication tools, and video conferencing applications** would further improve functionality.
- Additionally, incorporating real-time notifications, advanced analytics dashboards, and machine learning-based insights can make the system more intelligent, scalable, and industry-ready.
